

PRODUCT INFORMATION

AFMK

Item No. 10005254

CAS Registry No.: 52450-38-1
Formal Name: N-[3-[2-(formylamino)-5-methoxyphenyl]-3-oxypropyl]-acetamide
Synonyms: N-acetyl-N-formyl-5-Methoxykynuramine, NSC 688263
MF: C₁₃H₁₆N₂O₄
FW: 264.3
Purity: ≥98%
UV/Vis.: λ_{max}: 236, 266, 352 nm
Supplied as: A crystalline solid
Storage: -20°C
Stability: ≥2 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

AFMK is supplied as a crystalline solid. A stock solution may be made by dissolving the AFMK in the solvent of choice, which should be purged with an inert gas. XX is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of AFMK in ethanol is approximately 5 mg/ml and approximately 30 mg/ml in DMSO and DMF.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of AFMK can be prepared by directly dissolving the crystalline solid in aqueous buffers. The solubility of AFMK in PBS (pH 7.2) is approximately 1 mg/ml. We do not recommend storing the aqueous solution for more than one day.

Description

Melatonin is a neurotransmitter widely distributed in eukaryotes and is closely linked to circadian rhythms in mammals including humans. AFMK is a melatonin metabolite first identified in rat brain.¹ AFMK has antioxidant and free radical scavenging activities in several experimental models.² AFMK may also be measured in plasma as an index of melatonin synthesis and metabolism.³
