

## DATASHEET

### NBQX disodium salt

## Product overview

<b>Name</b>	NBQX disodium salt
<b>Cat No</b>	HB0443
<b>Biological action</b>	Antagonist
<b>Purity</b>	>99%
<b>Customer comments</b>	<i>High quality and affordable! We use this compound routinely in the lab for neuronal recordings. <b>Verified customer, The University of Montana</b></i>

*Worked just as it should, results indistinguishable from our previous product but at a significant cost reduction! **Verified customer, The University of Toronto***

*Good quality and great price! **Verified customer, The University of Newcastle***

*NBQX disodium salt produced by Hello Bio produced a very potent and "clean" block of synaptic AMPA currents, with no effect on other GABAA or NMDA receptors. **Verified customer, The University of Edinburgh***

**Description** Potent, selective, competitive AMPA receptor antagonist. Disodium salt.

## Images

## Biological Data

### Biological description

Potent, selective and competitive AMPA receptor antagonist. Also kainate receptor antagonist. Water soluble, disodium salt. Blocks the induction of excitatory post synaptic currents. Shows neuroprotective, antinociceptive and anticonvulsive actions. **NBQX** also available.

### Application notes

The AMPA receptor antagonist NBQX disodium salt inhibits the actions of glutamate by acting at AMPARs and is commonly used at 10  $\mu$ M. NBQX disodium salt from Hello Bio inhibits spontaneous and evoked excitatory post synaptic currents (EPSCs) (see Fig 1 above). Complete AMPA receptor blockade was achieved at 10  $\mu$ M and NBQX disodium salt was also effective at reducing these currents at 1  $\mu$ M.

### #Protocol 1: Evoked and spontaneous excitatory post synaptic currents (EPSCs)

- Whole cell voltage clamp recordings were obtained from layer V neurons of the mouse prelimbic cortex brain slice.

- EPSCs were evoked via a stimulating electrode placed in layers II/III delivering a single square (150  $\mu$ s) pulse every 10 sec at an intensity that gave a reliable EPSC.
- Neurons were held at -70 to -60 mV (the reversal potential of GABA currents). EPSCs were continuously stimulated and recorded in response to 5 min applications of varying concentrations of NBQX disodium salt until complete receptor inhibition.
- Spontaneous EPSCs were recorded before and after addition of NBQX disodium salt by holding the neuron at -70 mV and recording for 10 sec.
- Recordings for EPSCs were made in the absence of GABA<sub>A</sub>-R antagonists.

## Solubility & Handling

<b>Storage instructions</b>	-20 °C
<b>Solubility overview</b>	Soluble in water (100mM)
<b>Important</b>	This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not for human or veterinary use.

## Chemical Data

<b>Chemical name</b>	2,3-Dioxo-6-nitro-1,2,3,4-tetrahydrobenzo[f]quinoxaline-7-sulfonamide disodium salt
<b>Molecular Weight</b>	380.24
<b>Chemical structure</b>	
<b>Molecular Formula</b>	C <sub>12</sub> H <sub>6</sub> N <sub>4</sub> Na <sub>2</sub> O <sub>6</sub> S
<b>CAS Number</b>	479347-86-9
<b>PubChem identifier</b>	3272523
<b>SMILES</b>	[Na+].[Na+].NS(=O)(=O)c3cccc2c3c(cc1nc([O-])c([O-])nc12)[N+](O)=O
<b>Source</b>	Synthetic
<b>InChi</b>	InChI=1S/C12H8N4O6S.2Na/c13-23(21,22)8-3-1-2-5-9(8)7(16(19)20)4-6-10(5)15-12(18)11(17)14-6;;/h1-4H,(H,14,17)(H,15,18)(H2,13,21,22);;/q;2*+1/p-2
<b>InChiKey</b>	SVJKYIUJRJEABK-UHFFFAOYSA-L
<b>MDL number</b>	MFCD12910445
<b>Appearance</b>	Orange solid
