# **PRODUCT** INFORMATION

## (±)11(12)-EET Ethanolamide

Item No. 10008598

Formal Name:	N-(2-hydroxyethyl)-(±)11(12)-epoxy- 5Z,8Z,14Z-eicosatrienamide	HO
Synonym:	(±)11,12-EpETrE Ethanolamide	
MF:	$C_{22}H_{37}NO_3$	
FW:	363.5	$\langle$
Purity:	≥98%	
Supplied as:	A solution in ethanol	
Storage:	-80°C	
Stability:	≥1 year	NOTE: Relative stereochemistry shown in chemical structure

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

#### Laboratory Procedures

 $(\pm)$ 11(12)-EET ethanolamide is supplied as a solution in ethanol. To change the solvent, simply evaporate the ethanol under a gentle stream of nitrogen and immediately add the solvent of choice. Solvents such as DMSO and dimethyl formamide purged with an inert gas can be used. The solubility of  $(\pm)11(12)$ -EET ethanolamide in these solvents is approximately 20 and 30 mg/ml, respectively.

(±)11(12)-EET ethanolamide is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, the ethanolic solution of  $(\pm)11(12)$ -EET ethanolamide should be diluted with the aqueous buffer of choice. (±)11(12)-EET ethanolamide has a solubility of approximately 0.5 mg/ml in a 1:1 solution of ethanol:PBS (pH 7.2) using this method.

#### Description

Arachidonoyl ethanolamide (AEA; anandamide) is an endogenous lipid neurotransmitter with cannibingeric activity, binding to both the central cannabinoid ( $CB_1$ ) and periphenal ( $CB_2$ ) receptors.<sup>1,2</sup> Fatty acid amide hydrolase (FAAH) is the enzyme responsible for the hydrolysis and inactivation of AEA.<sup>3</sup> Metabolism of AEA by cyclooxygenase-2, leading to formation of prostaglandin ethanolamides, and by lipoxygenases has also been documented.<sup>4</sup> (±)11(12)-EET ethanolamide is a potential cytochrome P450 (CYP450) metabolite of AEA, although specific stereochemistry rather than a racemic mixture would likely ensue from enzymatic metabolism. CYP450 metabolism of AEA may be particularly relevant under conditions of FAAH inhibition. Evidence for the formation of (±)11(12)-EET ethanolamide in vivo has not been documented.
