Laboratory Procedures

Tenovin-6 (hydrochloride) is supplied as a crystalline solid. A stock solution may be made by dissolving the tenovin-6 (hydrochloride) in the solvent of choice, which should be purged with an inert gas. Tenovin-6 (hydrochloride) is soluble in organic solvents such as ethanol and DMSO. The solubility of tenovin-6 (hydrochloride) in these solvents is approximately 1 and 20 mg/ml, respectively.

Description

The tumor suppressor function of p53 hinges on its ability to function as a transcription factor. Tenovin-6 is an analog of tenovin-1, a small molecule activator of p53 transcriptional activity. At 10 μM, this compound is slightly more effective than tenovin-1 at elevating p53 activity in MCF-7 cells and reduces growth of ARN8 melanoma xenograft tumors in SCID mice at a dose of 50 mg/kg.¹ Tenovin-6 inhibits the protein deacetylase activities of purified human SIRT1, SIRT2, and SIRT3 *in vitro* with IC₅₀ values of 21, 10, and 67 μM, respectively.¹
