

DATASHEET

(+)-MK 801 maleate

Product overview

Name	(+)-MK 801 maleate
Cat No	HB0004
Alternative names	Dizocilpine maleate, Dizocilpine
Biological action	Antagonist
Purity	>98%
Customer comments	<i>We are using MK801 in our research. We are very satisfied with the quality of this product. Verified customer, UCSD</i>

*(+)-MK 801 maleate does what it should! It is a very good product, delivered very rapidly. **Verified customer, Research University Paris***

*...our first order with Hello Bio, has been satisfactory. The (+)-MK 801 Maleate has arrived in only some days and it was in perfect conditions. **Verified customer, Universidad de La Laguna***

Description

Potent, selective, non-competitive NMDA receptor antagonist

Images

Biological Data

Biological description	Potent, selective and non-competitive NMDA receptor antagonist ($K_d = 37.2$ nM). Approx 10-fold more potent than (-)-MK 801 maleate. Prevents calcium ion influx and long term potentiation induction. Shows anticonvulsant and neuroprotective properties.
Application notes	The NMDA receptor antagonist (+)-MK 801 is use-dependent and blocks NMDARs in their open conformation.

(+)-MK 801 from Hello Bio fully abolishes evoked NMDAR currents at 10 μ M rapidly upon repeated stimulations (see Fig 1 above). At concentrations of 50 μ M a more rapid receptor blockade was observed.

#Protocol 1: Evoked NMDA receptor currents

- Whole cell voltage clamp recordings were obtained from layer V neurons of the mouse prelimbic cortex brain slice.
- NMDA currents were evoked via a stimulating electrode placed in layers II/III and

evoked by a single square (150 μ s) pulse every 10 sec at a stimulus intensity that gave a reliable NMDA current.

- Neurons were held at +40 mV to relieve NMDA currents from their voltage-dependent Mg^{2+} block.
- NMDA currents were continually stimulated and recorded in response to continual bath applications of (+)-MK 801 until NMDA currents were completely abolished.
- All NMDAR recordings were made in the presence of GABA_A-R and AMPAR antagonists.

Solubility & Handling

Storage instructions Solubility overview Important

Room temperature

Soluble in water (25mM, gentle warming) and in DMSO (100mM)

This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not for human or veterinary use.
